

MindGod

India's AI-Powered Mental Health Platform

Product Specification Document · v1.0

BetterHelp + Headspace, reimagined for India. *Warm. Accessible. Culturally fluent.*

1. Platform Overview

MindGod is a full-stack mental health SaaS platform built for India combining AI-guided peer support, evidence-based CBT tools, and real human therapy via WebRTC video sessions. The platform serves individuals, therapists, corporate/college organisations, and internal operations through four distinct portals on a single shared backend.

The Four Portals

Individual User	Therapist Portal	Org Admin	Super Admin
Chat with Manas AI, track mood, book therapists	Manage bookings, AI client briefs, WebRTC sessions	Anonymous team wellness analytics, seat management	Ops, therapist verification, platform analytics

1.1 Design Philosophy

Aesthetic direction: Organic warmth meets modern calm. Soft teal anchors every screen. Coral accents inject human warmth. Gold nods to Indian cultural identity. The result is a space that feels like a lit room where someone genuinely listens — not a clinical dashboard, not a cold SaaS product.

Design Tokens

Primary	#2E6E65	(Teal)
Accent	#F4845F	(Coral)
Gold	#F4C261	
Crisis	#DC2626	(Red)
Background	#FAFAF9	
Radius	16px	

Typography & Icons

Headings: Sora (Google Fonts)

Body: Plus Jakarta Sans (Google Fonts)

Icons: Lucide React

Animations: Framer Motion

Hard Rules

- X No purple gradients
 - X No Inter font
 - X No clinical / corporate SaaS look
- ✓ Always warm, always human

1.2 Tech Stack

Layer	Technology	Notes
Frontend	Next.js 14 (App Router) + Tailwind CSS + shadcn/ui	React server components, streaming SSR
State	Zustand + TanStack Query v5	Global state + server cache
Database	MongoDB Atlas (M0 free) + Mongoose	Mumbai region — DPDPA compliant
Cache	Upstash Redis (free tier)	Rate limiting, session tokens
AI Chat	Groq API — llama-3.3-70b-versatile	Zero cost, ultra-fast inference
AI Backup	Google Gemini 1.5 Flash	Automatic fallback if Groq fails
Video	LiveKit (self-hosted WebRTC)	E2E encrypted media, no TURN fees
Payments	Razorpay	UPI + cards + subscriptions
Auth	NextAuth.js + MSG91 OTP	Phone-only, no email required
Storage	Cloudflare R2 (10 GB free)	Intro videos, profile images
Email	Brevo (300/day free)	Booking confirmations, alerts
Analytics	PostHog + GlitchTip	Product analytics + error tracking

2. Core Features

2.1 Onboarding Flow (Build First)

The onboarding is the make-or-break moment. It must feel safe, warm, and effortless — target completion time under 90 seconds.

Step	Screen Name	Key Detail
1	Apna Dil Kholo	Full-screen teal background, animated breathing circle (4 s CSS loop), 'Begin' fades in after 2 s
2	Mood Slider	Large emoji gradient 😊→😄 (1–10), screen colour shifts cool→warm as score rises
3	Select Concern	6 pill buttons: Work Stress, Family, Loneliness, Health, Relationships, Money — multi-select
4	What Do You Need?	3 large cards: 'Someone to talk to' / 'Tools & exercises' / 'Just to express myself'
5	Phone + OTP	Indian format (+91), 'No name required. 100% anonymous.'
6	First AI Message	Manas types for 1.5 s then streams a personalised empathy message word-by-word

2.2 User Portal — Screens

Home Screen

- Personalised greeting + streak badge
- Daily mood emoji slider (1–10)
- Latest AI chat preview with 'Continue'
- Rotating daily CBT prompt
- One-tap breathing exercise shortcut
- Always-visible crisis button (bottom-right)

Mood Tracker

- 30-day calendar grid (coloured circles, red→green)
- 7-day Recharts trend line
- AI monthly insight ('Mood lowest on Mondays')

AI Chat — Manas

- WhatsApp-style bubbles (teal = user, white = AI)
- Streaming word-by-word response via SSE
- Free tier counter: '2 of 3 messages remaining'
- Upgrade prompt only AFTER limit hit
- Crisis mode: blurred background + helpline overlay

CBT Journal

- Daily rotating prompt (30-prompt bank)
- 4-field thought record: Situation / Thought / Feeling / Reframe
- Free: 3 entries/week; Paid: AI responds to each entry

Breathing Exercises (Offline)

- 4-7-8 · Box Breathing · 5-4-3-2-1 Grounding
- Body Scan · Emergency Calm (3-cycle shortcut)
- Animated SVG circle, phase countdown, audio toggle

2.3 AI Companion — Manas

Who is Manas?

Manas is an empathetic AI wellness companion — NOT a therapist. It is a warm, caring friend trained in CBT and mindfulness who listens deeply and helps users understand their own thoughts and feelings.

Behaviour Rules:

- Never diagnose any condition. Never give medical advice.
- Responses under 150 words with one thoughtful follow-up question.
- Apply CBT gently: help users notice and reframe automatic thoughts.
- Reference Indian context naturally: family pressure, academic anxiety, career stress.
- Always disclose AI identity — users always know they are talking to AI.

Crisis Protocol:

Keywords monitored: 'want to die', 'kill myself', 'end my life', 'suicide', 'can't go on', 'hurt myself'. On detection → immediate response with iCall helpline (9152987821), blurred UI, and breathing exercise. Regular conversation pauses until safety confirmed.

API Architecture:

- Primary: Groq API — llama-3.3-70b-versatile (free, streamed via SSE)
- Fallback: Google Gemini 1.5 Flash API (free, automatic on Groq error)
- Rate limits: Free = 3 msgs/day · Mann Shanti = 100 · Apna Therapist = unlimited

2.4 Video Therapy — LiveKit WebRTC

Session Flow

- User books slot → Razorpay payment → confirmation SMS
- 15 min before: both parties receive LiveKit room tokens (2-hour TTL)
- Full-screen WebRTC session with overlay UI
- UI auto-hides after 3 s of inactivity
- 5-min remaining toast notification
- Post-session rating flow

Session Room UI

- Session countdown timer (top centre)
- Camera / mic toggles
- Text-chat side panel (for text-based clients)
- Private therapist notes sidebar (therapist view only)

Therapist AI Brief

Shown to therapist before each session:

- Client 7-day mood chart
- Key themes from recent journal entries
- Risk level indicator (low / medium / high)
- Summary of last session

Security

- All media end-to-end encrypted (WebRTC DTLS-SRTP)
- Therapist notes encrypted at rest
- AI brief encrypted, therapist-only
- No unencrypted media ever transmitted

2.5 Therapist Marketplace

Search + filter by specialty, language, gender, price range (₹500–₹5,000), and availability. Each therapist card shows: photo, name, RCI verification badge, specialisations, languages, star rating, session count, and fee.

- Therapist profile: 60-second intro video (autoplay muted), bio, qualifications, approach
- Real-time calendar: select slot → UPI / card payment via Razorpay → instant confirmation
- Therapist subscription tiers: Basic · Professional · Clinic

3. Data Architecture, Portals & Compliance

3.1 MongoDB Data Models

All data stored in MongoDB Atlas — Mumbai region (ap-south-1). Six core collections:

Collection	Key Fields
User	phone (hashed), language, tier (free/mann_shanti/apna_therapist), onboarding, subscription, streak, emergency_contact, org_id, is_anonymous, deleted_at
Mood	user_id, score (1–10), tags [], note, date
Conversation	user_id, session_id, messages [{role, content, timestamp}], risk_level, escalated, summary
Therapist	name, rci_number, verified, specializations [], languages [], session_fee, commission_rate, availability [{day, slots[]}], rating
Booking	user_id, therapist_id, slot, status, payment {razorpay_order_id, amount, paid}, video_room_id, therapist_notes (encrypted), ai_brief (encrypted)
Organization	name, type, seats, contract {start, end, pepm}, sso_domain, departments [{name, user_ids[]}]

3.2 Admin Portals

Therapist Portal (therapist.mindgod.in)

- Dashboard: today's session timeline, monthly earnings, unread messages
- Profile editor: photo, bio, specialisations, availability, fee
- Week-view calendar: click to block / unblock slots
- AI brief card before each session (mood chart, themes, risk)
- Session room: LiveKit + private notes sidebar
- Earnings table: sessions, amounts, commissions, payout dates

Org Admin Portal (org.mindgod.in)

- Overview cards: avg team mood · active users · engagement %
- 30-day team mood trend line (Recharts)
- Department heatmap (D3.js) — red/yellow/green by avg mood
- Burnout alert banner: 'Sales dept stress +23% this week'
- Seat management: user table, activation status, departments
- ESG wellness report — one-click PDF download

Privacy hard rule: individual data NEVER shown. Minimum 10 users per department required before any aggregate is displayed.

3.3 Subscription & Payments

Feature	Free	Mann Shanti ₹199/mo	Apna Therapist ₹499/mo
AI chat messages/day	3	100	Unlimited
CBT journal entries/week	3	Unlimited	Unlimited
AI journal responses	✗	✓	✓
Breathing exercises	✓ All 5	✓ All 5	✓ All 5
Mood calendar	7 days	30 days	30 days
Therapist session discount	—	10%	20%
Priority booking	✗	✗	✓
Crisis line access	✓ Always	✓ Always	✓ Always

Paywall appears *ONLY* after limit is hit — never before. No manipulation, no dark patterns.

3.4 Compliance & Privacy

DPDPA (Digital Personal Data Protection Act) Compliance

- All data stored exclusively in India (Mumbai region)
- Users can request full data deletion — processed within 72 hours
- Phone numbers stored hashed — never in plaintext
- Anonymous mode: users never required to share name
- Org admins see zero individual data — aggregates only
- Min 10 users per department before any metric is shown
- AI identity always disclosed to users
- Crisis line free always — no login, no paywall

3.5 Build Order & API Surface

Recommended Build Sequence

1. 01 MongoDB models + seed data
2. 02 Auth — OTP (MSG91) + JWT + NextAuth
3. 03 AI chat endpoint — Groq + fallback + streaming
4. 04 Crisis detection — keyword matching
5. 05 Onboarding flow (5 steps)
6. 06 Home + AI chat screens
7. 07 Mood check-in + 30-day calendar
8. 08 Breathing exercises (5, fully offline)
9. 09 Therapist listings + Meilisearch
- 10.10 Booking flow + Razorpay
- 11.11 LiveKit WebRTC video room
- 12.12 CBT journal
- 13.13 Therapist portal
- 14.14 Org admin portal + D3 heatmap
- 15.15 Subscription tiers + paywall
- 16.16 Polish + mobile responsiveness

Core API Endpoints

- POST /api/auth/send-otp
- POST /api/auth/verify-otp
- GET /api/user/me
- POST /api/chat (streaming SSE)
- GET /api/chat/history
- POST /api/mood
- GET /api/mood/calendar
- GET /api/mood/insights (AI-generated)
- POST /api/journal
- GET /api/therapists (Meilisearch)
- GET /api/therapists/:id
- POST /api/bookings
- POST /api/video/tokens (LiveKit JWT)
- GET /api/org/wellness (aggregated)
- GET /api/org/heatmap
- POST /api/crisis/log (encrypted)

Definition of Done

Show it to someone who has never heard of mental health apps.

If they say "I'd actually use this" — you've won.
